

Get your Express Pass to access single cell genomics

Now—Chromium Controller, for \$35,000*

Now is the best time to start your single cell analysis journey. The Chromium Controller, powered by Next GEM technology, enables integrated analysis of single cell gene expression, immune profiling, chromatin accessibility, and more. Efficiently partition 100–80,000+ cells with low doublet rate and superior cell capture rate in a compact instrument.

Uncover molecular insights, dissect cell-type differences, investigate the innate and adaptive immune system, detect novel subtypes and biomarkers, and map the epigenetic landscape, cell by cell.

For a limited time with the “Express Pass”—get a Chromium Controller for \$35,000*

- **Cell by cell characterization.** Go beyond population averages and resolve cellular heterogeneity with single cell capture capabilities.
- **Rapid single cell profiling.** Partition hundreds to tens of thousands of nuclei or cells per chip in minutes.
- **Compact and flexible.** Small instrument footprint easily integrates into existing laboratory infrastructure.

Make single cell work for you.
