Save up to 30%* on Precision water baths

Each of our high-performance Precision water baths comes with a scientific duck

Thermo Scientific™ Precision™ water baths are designed to save valuable benchtop space with smaller footprints compared to previous models while still maintaining excellent temperature uniformity and stability.

The product family features automatic on and off timers for efficient work scheduling, rugged construction, and advanced temperature control. Additionally, audible alarms help protect samples by alerting users to temperatures exceeding the defined range, and the icon-based graphical user interface has four preset options for easy navigation and use.

The Precision water bath portfolio includes general purpose, shaking, circulating, and coliform water baths. Each line has slightly different features to meet various application needs, but all are easy to maintain and clean with their coil-free interiors.

Other product features include low fluid protection for increased safety and a gable cover that can be hinged open when using the bath.
